

Section	Chapter Name	TOC
Introduction to Agile	Agile Foundations: Mindset, Lifecycle, and Modern Project Impact	What is Agile?: Evolution from traditional models, Agile as a mindset vs methodology Why Agile?: Business agility, Customer-centric development Agile mindset: Growth mindset, Embracing change and uncertainty Agile lifecycle overview: Iteration planning, Continuous feedback loops Benefits of Agile in modern projects: Faster time-to-market, Improved team collaboration
Agile Values and Principles	Agile Manifesto: Core Values and Guiding Principles	Agile Manifesto: History and authors, Interpretation in modern contexts Four core values: Individuals vs tools, Working software vs documentation Twelve Agile principles: Early delivery, Sustainable pace
Agile vs. Traditional Models	Agile vs. Waterfall: Key Differences, Benefits, and Limitations	Agile vs. Waterfall comparison: Planning styles, Feedback and adaptability Key differences: Documentation approach, Risk management Benefits and Limitations: Agile in regulated environments, Waterfall for fixed scope
Agile Frameworks and Methodologies	Agile Frameworks: Scrum, Kanban, and Selecting the Right Approach	Overview of frameworks: Scrum vs Kanban vs SAFe Scrum process flow: Sprint cycle, Scrum board and artifacts Kanban board and WIP limits: Visualizing workflow, Managing bottlenecks Choosing the right framework: Team size, Project complexity
Roles and Responsibilities	Agile Roles and Collaboration: Scrum, Stakeholders, and Coaching	Scrum roles: Product Owner duties, Scrum Master as servant leader Stakeholder involvement: Internal vs external, Managing expectations Role of Agile Coach: Coaching vs mentoring, Driving transformation Cross-functional teams: Skill diversity, Self-organizing teams
Agile Ceremonies	Agile Ceremonies and Planning: From Backlog to Release	Sprint Planning: Capacity planning, Prioritization techniques Daily Stand-up: Three-question format, Anti-patterns Sprint Review: Demo best practices, Stakeholder feedback Sprint Retrospective: Retrospective formats, Action item tracking Backlog Refinement: Grooming techniques, Estimation methods Release Planning: Basic of what is release planning
Agile Artifacts	Agile Artifacts and Standards: Backlogs, User Stories, and Quality Definitions	Product Backlog: Prioritization models, Backlog health checks Sprint Backlog: Task breakdown, Ownership and commitment User Stories: INVEST model, Good vs bad examples Acceptance Criteria: Given-When-Then format, Linking to test cases Definition of Done (DoD): Team vs org DoD, Compliance checks Definition of Ready (DoR): Entry criteria, Readiness checklist Minimum Viable Product (MVP): MVP vs MMP vs MLP, Validating assumptions
Jira	Agile Tools and Metrics: JIRA, Confluence, and Performance Tracking	JIRA basics and workflows: Issue types, Workflow customization Confluence: Basics Collaborative documentation
Agile Success and Challenges	Measuring Agile Success and Overcoming Challenges	Agile metrics and KPIs: Lead time, Team happiness index Common Agile challenges: Resistance to change, Leadership misalignment
